Re Item V

**Reasoned statement with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement**

1. Reference is made to the following document:
D1: EP-A-1 316 873 (HEWLETT PACKARD CO) 4 June 2003 (2003-06-04)
2. The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of independent claims 1 and 6 is not new in the sense of Article 33(2) PCT.
 1. document D1 discloses the features of independent claim 1 as follows: Method to secure the execution of a program in an electronic assembly [column 1, lines 5-6, in particular "virus checking executable code"] including data processing means [figure 3, "processing device 302"] and data storage means [figure 3, "memory 304"], characterised in that it consists in checking the execution of each instruction of at least one portion of said program [column 25, lines 1-4, in particular "the signature check will be done only the first time the code is executed"] by performing during the execution of said portion a calculation using predetermined values, depending on or associated with each of said instructions and by comparing the result obtained with a precalculated value [column 25, lines 29-31, in particular "... to perform a signature comparison of code fragment with a set of known virus signatures"].
 2. Independent claim 6 substantially corresponds to independent claim 1. The lack of novelty objection raised in point 2.1 herein above therefore equally applies to claim.
 3. Dependent claims 2-5 and 7-11 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty and/or inventive step, see document D1 and the corresponding passages cited in the search report.
